

Experiment-1

1. A local library needs a website to streamline operations and enhance user experience. The site will include a catalog for searching and viewing books, user accounts for borrowing and managing books, and an admin dashboard for managing inventory and user data. Essential features include a search function, book details page, user login system, and contact form, The system helps both students and library managers to keep constant track of all the books available in the library. It allows both the admin and the student to search for the desired book. It becomes necessary for colleges to keep a continuous check on the books issued and returned and even calculate fines.

Librarian Admin:

☐ Login

☐ Add Book

☐ Update/Delete Book

☐ Issue Book for student

☐ Return Book Status

☐ Make Fine

☐ Update material (year, semester wise)

☐ View material

User

☐ Login

☐ Register

☐ Search Book

☐ My Borrow History Book

o Issue Date, Exp Date

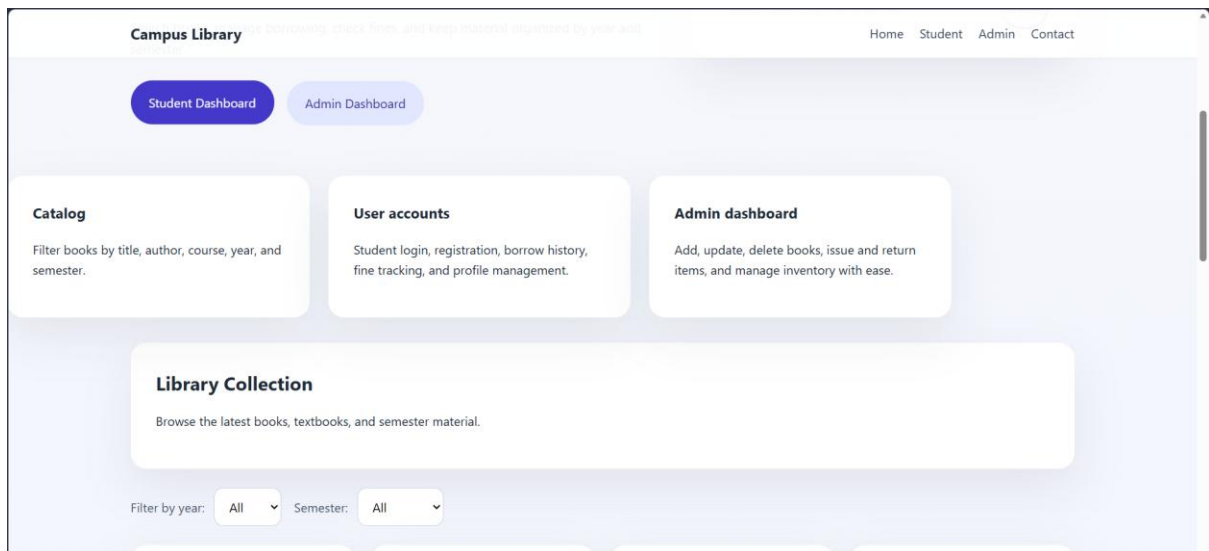

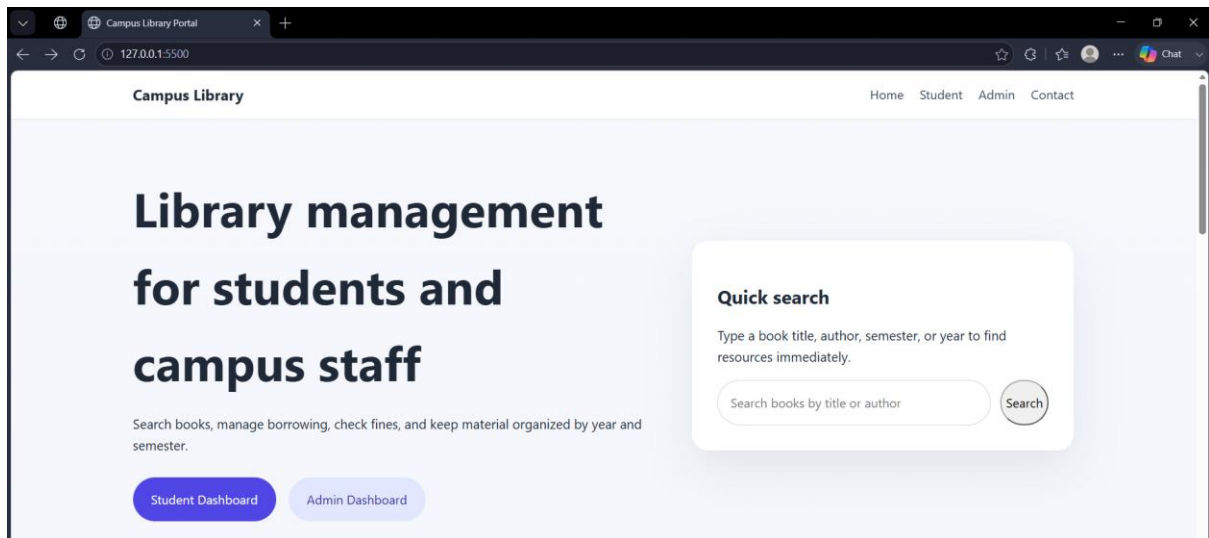

☐ Check Fine

☐ Search material (year, semester wise)

☐ Download material

☐ My profile

OUTPUT:

Library Collection

Browse the latest books, textbooks, and semester material.

Filter by year: All Semester: All
